Note: The example features provided are for reference purposes only. This is the core idea; all features are not mandatory. Participants are encouraged to innovate, add new features, and expand the solution based on their own ideas and creativity. Focus on the judging criteria such as **Technicality, Originality, Practicality, Aesthetics, and Wow Factor** to maximize your chances of scoring higher.

HEALTH TECH

Statement ID	Problem Statement
HT1	In today's fast-paced world, medical consultations are often rushed, leading patients to forget important details or communicate ineffectively. This results in incomplete diagnoses and reduced quality of care. Imagine a platform that helps patients prepare beforehand by organizing their symptoms, medical history, and concerns into a clear format, making consultations more efficient and meaningful. **Example Features:** ● **Symptom Form Builder:** Patients can input symptoms, medical history, medications, and concerns through guided forms. ● **Structured Summary Output:** The system generates a clean, well-organized report that can be shared with the doctor before or during the visit. ● **Visit Checklist:** Provides a personalized checklist of important topics and questions the patient should discuss during the consultation. ● **Export/Share Feature:** Patients can download or directly send their consultation summary to the doctor via email or app integration. This platform focuses on **before the consultation**, not after.

HT2	In today's healthcare journey, patients often struggle to follow treatment plans consistently due to a lack of structure and guidance. This leads to missed medications and reduced effectiveness. Imagine a platform that simplifies treatment plans into clear, daily routines, helping patients stay consistent and on track with recovery. **Example Features:** ● **Treatment Plan Input:** Patients can enter prescriptions, diet instructions, exercise routines, and other medical advice provided by their doctor. ● **Daily Routine Generator:** Automatically converts the treatment plan into clear, day-wise tasks (medication timings, meals, workouts, etc.). ● **Task Tracker Dashboard:** A centralized dashboard where users can view, manage, and track their daily health tasks. ● **Completion Tracking & Progress View:** Visual insights into adherence, streaks, and overall progress to motivate consistency. This platform focuses on the **execution of treatment**, not just reminders
HT3	In today's healthcare journey, patients often receive multiple medical documents but struggle to manage them effectively. This leads to confusion, missed follow-ups, and poor continuity of care. Imagine a platform that organizes these documents into a clear, step-by-step workflow, helping patients know what to do next at every stage of treatment. **Example Features:** ● **Document Upload:** Patients can upload various medical documents such as reports, prescriptions, and invoices in one place. ● **Stage Tagging:** Documents can be categorized by stages like diagnosis, treatment, and follow-up for better organization. ● **Workflow Timeline:** A visual timeline that shows the patient's healthcare journey and progress across different stages. ● **Pending Actions Tracker:** Highlights pending tasks such as tests, medications, or doctor visits derived from documents. It combines **document + action workflow**

HT4	In today's healthcare experience, patients often leave consultations confused due to complex medical terminology. This leads to misunderstandings about their condition and treatment. Imagine a platform that simplifies doctor-patient conversations into clear, easy explanations, helping patients fully understand their care and next steps. **Example Features:** ● **Conversation Input:** Patients can input doctor notes, prescriptions, or even transcribed consultation conversations. ● **AI Simplifier:** Converts complex medical **jargon** into easy-to-understand, everyday language. ● **Context Awareness:** Ensures that simplification retains the correct medical meaning and intent. ● **Highlight Important Actions:** Clearly identifies key instructions such as medications, tests, and lifestyle changes. ● **Multi-language Output:** Provides simplified explanations in multiple languages for better accessibility. This focuses on **conversation clarity**, not just reports

FINTECH

Statement ID	Problem Statement
FT1	In today's digital world, managing daily expenses can be tedious, as users must manually log each transaction. This makes tracking inconsistent and time-consuming. Imagine a system where users simply send a message like "Paid ₹50 for food via UPI," and it's instantly recorded, categorized, and updated in a real-time dashboard making expense tracking effortless. **Example Features:** ● **Chat Input Interface:** Users can log expenses by sending natural language messages through WhatsApp or Telegram bots. ● **Automatic Expense Logging:** The system instantly parses messages and records transactions without manual entry. ● **Smart Categorization:** Automatically classifies expenses like food, travel, bills, shopping, etc. ● **Real-Time Dashboard:** A web dashboard provides insights into daily, weekly, and monthly spending patterns. ● **Search & History:** Users can retrieve past transactions via chat commands or view detailed history on the dashboard. Focus on **effortless expense tracking through chat**, not traditional apps
FT2	In today's financial landscape, many individuals struggle to assess loan affordability and eligibility. This leads to poor borrowing decisions and financial stress. Imagine a smart assistant that analyzes your financial profile and provides personalized guidance helping you make safe and informed borrowing decisions. **Example Features:** ● **Financial Input System:** Users can enter salary, monthly expenses, existing obligations, and financial goals. ● **EMI Affordability Calculator:** Calculates how much EMI the user can comfortably pay without financial strain. ● **Loan Eligibility Estimation:** Provides an estimate of loan amount users are eligible for based on their profile. ● **Monthly Budget Breakdown:** Shows how loan repayment fits into overall monthly expenses. ● **Risk Indicator:** Highlights chances of over-borrowing and financial stress. ● **Safe EMI Suggestions:** Recommends EMI ranges that minimize risk. Focus on **smart financial decision-making**, not just basic loan calculation

FT3	In today's digital world, managing group expenses among friends, roommates, or travel groups often becomes confusing and inefficient. People struggle to keep track of who paid, who owes whom, and how to settle balances fairly. Existing solutions simply split bills but fail to reduce complexity in settlements. Imagine a system that intelligently analyzes expenses, minimizes transactions, and provides a clear, optimized settlement plan in the simplest way possible. **Example Features:** ● **Group Expense Entry:** Users can add shared expenses manually or through **chat-based input** ● **Auto Split Engine:** Automatically divides expenses among participants ● **Settlement Optimizer: Minimizes the number of transactions** by optimizing payment flow ● **Fairness Adjustments:** Supports **unequal splits** for realistic scenarios ● **Visual Debt Graph:** Clearly shows **who owes whom** ● **One-Click Settlement Plan:** Generates an **optimized step-by-step settlement** Focus on reducing **complexity in group finance** through **intelligent settlement optimization**, not just **basic expense splitting**
FT4	In today's digital world, scams like fake calls and phishing are increasingly common, and many fall victim due to lack of awareness. Existing methods are passive and don't prepare users for real situations. Imagine an interactive platform that simulates real scam scenarios helping users identify threats and respond safely. **Example Features:** ● **Simulated Scam Scenarios:** Users receive realistic fake calls, SMS, or chat messages mimicking common scams. ● **Interactive Decision-Making:** Users choose how to respond in each scenario, making it a hands-on learning experience. ● **Real-Time Red Flag Detection:** Highlights suspicious elements (unknown links, urgency, threats, etc.) during the simulation. ● **Awareness Tips & Guides:** Provides educational content on how to identify and avoid scams. ● **Performance Score & Feedback:** Gives users a score and detailed feedback after each simulation. Focus on **experiential learning through simulation**, not just passive awareness.

EDTECH

Statement ID	Problem Statement
ET1	In today's education system, students develop skills through hackathons, internships, projects, and self-learning but there is no unified platform that accurately reflects their true capabilities. Recruiters and colleges still rely heavily on marks, overlooking practical skills and real-world experience. Imagine a system that evaluates and showcases a student's overall credibility combining academics with real achievements into one trusted score. **Example Features:** ● **Unified Student Profile:** Combines academics, projects, hackathons, internships, and certifications in one place. ● **Dynamic Credibility Score:** Generates a score with detailed category-wise breakdown (skills, experience, academics). ● **Public Shareable Profile:** Provides a portfolio-like link that students can share with recruiters or colleges. ● **Verification System:** Allows users to upload proofs such as certificates, GitHub links, and project demos for authenticity. ● **Project Evaluation:** Analyzes GitHub repositories and activity to assess project quality and impact. Focus on **proof-based student identity**, not just marks-based evaluation.
ET2	Students often face clashing deadlines assignments, exams, hackathons leading to stress and missed work. There is no intelligent system to manage and resolve these conflicts. Imagine a smart tool that organizes deadlines, detects overlaps, and creates an optimized plan to keep students on track. **Example Features:** ● **Deadline Input System:** Add all upcoming deadlines including assignments, exams, and events. ● **Visual Conflict Calendar:** Clearly displays overlapping deadlines. ● **Priority-Based Scheduling:** Assign importance levels to tasks for better planning. ● **Smart Reminders:** Get timely alerts to avoid missing deadlines. ● **Optimal Task Sequencing:** Suggests the best order to complete tasks. Focus on **resolving deadline conflicts intelligently**, not just tracking tasks.

ET3	In today's competitive job market, students often apply for internships and jobs without knowing if they are truly prepared, leading to repeated rejections and frustration. There is no system that objectively evaluates real interview readiness. Imagine a smart tool that assesses your skills, analyzes your work, and tells you honestly whether you're ready along with what to improve. **Example Features:** ● **Role Selection:** Choose a target role (e.g., frontend developer, data analyst). ● **Skill Checklist:** View required skills and competencies for the selected role. ● **Self-Assessment + Proof Upload:** Rate your skills and upload projects, resumes, or GitHub links as proof. ● **Readiness Score:** Get a clear score indicating how prepared you are for the role. Focus on **honest interview readiness**, not just application preparation.
ET4	In today's academic environment, students often struggle to revise large volumes of study material efficiently, leading to poor retention and last-minute stress. Imagine a platform that uses AI to convert lengthy content into concise, easy-to-understand revision notes making studying faster and smarter. **Example Features:** ● **AI Text Summarization:** Converts long chapters into short, meaningful summaries. ● **Keyword Extraction:** Highlights important concepts and terms for quick recall. ● **Quick Revision Notes Generation:** Creates simplified notes ideal for last-minute revision. ● **Downloadable Reports:** Allows users to download summaries for offline use. ● **Subject Categorization:** Organizes content based on subjects and topics. ● **Admin Content Management Panel:** Enables management and uploading of study materials. Focus on **faster and smarter revision**, not just content consumption.

Smart Governance

Statement ID	Problem Statement
SG1	In today's academic and research landscape, students and researchers often miss valuable scholarships and funding opportunities because information is scattered across platforms. Eligibility criteria are complex, deadlines are hard to track, and there is no single platform that brings everything together. Imagine a unified portal that helps users easily discover, track, and apply for the right scholarships and research grants. **Example Features:** ● **Centralized Opportunity Hub:** A single platform listing scholarships, fellowships, and research grants. ● **Advanced Search & Filters:** Easily filter by field, education level, funding amount, and location. ● **Application Tracking Dashboard:** Track status of applied scholarships and grants. ● **Deadline Calendar:** Visual calendar with reminders for upcoming deadlines. ● **Simplified Details View:** Clear display of eligibility, benefits, and direct application links. Focus on **centralized discovery and intelligent matching**, not scattered information.
SG2	In India, many low-income citizens face legal issues such as labor disputes, domestic conflicts, and tenancy problems but cannot afford legal representation. They are often unaware of free legal aid services provided by organizations . Legal information is complex and difficult to understand, making it challenging for people to access the right help at the right time. Imagine a platform that simplifies legal access guiding users from problem identification to finding the right legal support. **Example Features:** ● **Easy Problem Input:** Users can describe their legal issue through text or voice in simple language. ● **Legal Aid Matching:** Connects users with nearby legal aid centers, NGOs, or support services. ● **Appointment Booking:** Allows users to schedule consultations with legal experts or organizations. ● **Simplified Legal Guidance:** Provides basic legal advice in easy-to-understand terms. ● **Multilingual & Voice Support:** Ensures accessibility for users from diverse

	linguistic backgrounds. Focus on **accessible and understandable legal suppor**t, not just information.
SG3	In today's fast-paced urban environment, citizens frequently face issues such as poor road conditions, water supply disruptions, and electricity failures. However, existing complaint systems are often slow, lack transparency, and make it difficult to track progress. Imagine a centralized digital platform where citizens can easily report issues, which are automatically routed to the right authorities, with real-time updates on resolution all in one place. **Example Features:** ● **Complaint Submission:** Users can submit complaints with geo-tagging, photos, and detailed descriptions. ● **Auto-Routing System:** Complaints are automatically forwarded to the relevant department based on issue type and location. ● **Real-Time Tracking:** Users can track complaint status (pending, in-progress, resolved) in real time. ● **Escalation Mechanism:** Issues are escalated to higher authorities if not resolved within a defined time. ● **User Profiles:** Citizens can view complaint history; officials can manage assigned cases efficiently.. ● **Admin Dashboard:** Authorities can monitor complaints, response times, and departmental performance. Focus on **transparency and accountability** in public grievance resolution, not just complaint submission.
SG4	In today's urban environments, public resources like garbage trucks, water tankers, and maintenance teams are often allocated using fixed schedules or manual planning. However, real-world demand varies daily due to factors like population density, weather conditions, and unexpected events, leading to inefficiencies and delays. Imagine a platform that predicts demand and allocates resources dynamically ensuring the right services reach the right place at the right time. **Example Features:** ● **Data Input System:** Collects area-wise complaint data, population density, and optional weather inputs. ● **Demand Prediction Engine:** Identifies high-demand zones and ranks areas based on urgency. ● **Interactive Map Dashboard:** Visualizes resource allocation and priority heatmaps using map-based UI. ● **Smart Allocation Suggestions:** Provides actionable outputs like resource distribution recommendations. ● **Real-Time Updates:** Continuously adjusts allocation based on incoming data. Focus on **predictive, real-time resource optimization**, not static scheduling.

AUTOMATION

Statement ID	Problem Statement
AU1	In today's small business environment, daily operations are often managed through spreadsheets and informal communication, leading to inefficiencies and lack of accountability.Imagine a centralized platform that allows business owners to create, assign, and track tasks seamlessly improving productivity and team coordination. **Example Features:** ● **Task Creation & Assignment:** Create tasks and assign them to team members ● **Priority & Deadline Setting:** Set importance levels and deadlines for better planning. ● **Task Status Tracking:** Monitor progress (pending, in-progress, completed) in real time. ● **Team Performance Dashboard:** View productivity insights and team performance metrics.. ● **Admin Monitoring Panel:** Allows business owners to oversee operations and manage workflows. Focus on structured workflow and accountability, not informal task management.
AU2	In today's digital-first world, consistently creating engaging social media videos is challenging for individuals, influencers, and small businesses due to time, creativity, and editing constraints.Imagine a platform that automatically transforms simple inputs like text or images into high-quality, ready-to-post videos making content creation fast, easy, and accessible to everyone. **Example Features:** ● **Content Input:** Users can provide text prompts, blog content, captions, or images to generate videos. ● **Script Generation:** Automatically converts input into an engaging short-form video script. ● **Automated Video Creation:** Generates videos using relevant visuals, animations, and stock footage. ● **Platform Optimization:** Formats videos for platforms like Reels and Shorts with correct aspect ratios. Focus on **end-to-end automated video creation**, not just editing tools.

AU3	In today's fast-paced travel environment, manual airport check-in procedures often lead to long queues and delays, especially during peak hours. This results in passenger frustration and inefficient airport operations. Imagine a system that enables passengers to complete check-in quickly through self-service kiosks or mobile apps making the boarding process faster and smoother. **Example Features:** ● **Self-Service Check-in:** Passengers can check in using kiosks or mobile applications. ● **Digital Boarding Pass:** Generate and store boarding passes digitally. ● **Seat Selection:** Allow users to choose or modify seats during check-in. ● **Baggage Check Integration:** Enable tagging and tracking of baggage through the system. ● **Real-Time Flight Updates:** Provide live notifications about boarding time, gate changes, etc. ● **User Profiles:** Store passenger details for faster future check-ins. ● **Admin Dashboard:** Airport staff can monitor passenger flow and system performance. Focus on **seamless, self-service check-in experience**, not manual airport processes.
AU4	In today's world, legal documents are often filled with complex language that is difficult for common people to understand, leading to confusion and poor decision-making. Imagine a tool that instantly simplifies legal documents into clear, easy-to-understand language making legal information accessible to everyone. **Example Features:** ● **Document Upload/Input:** Users can upload PDFs or paste legal text directly. ● **Simple Language Conversion:** Converts complex legal jargon into plain, easy English. ● **Bullet Point Summary:** Generates concise summaries for quick understanding. ● **Key Risk Highlighting:** Identifies and highlights important clauses and potential risks. ● **Downloadable Output:** Allows users to save simplified versions for future reference. Focus on making **legal content understandable**, not just accessible.
